

ABSTRACT OF THE DISCLOSURE

Said protective screen comprises a front wall (1), connected to a lateral wall (2) running perpendicular or essentially perpendicular to said front wall (1), said walls (1, 2) comprising transparent panels (8, 10) over at least a part of the height thereof. The upper part (8) of the front wall (1) is inclined forwards, forming an overhang which permits the operator to approach the working region and with two holes (11, 12) to permit the passage of said operator's arms.
